

testing::Test

```
classDiagram
    class TestPerceptionModule {
        # pm
    }
    class testingTest["testing::Test"]
    TestPerceptionModule --|> testingTest
```

The diagram illustrates a class hierarchy. At the bottom is the 'TestPerceptionModule' class, which is shaded gray and contains a private attribute '# pm'. Above it is the 'testing::Test' class, which is white. A blue arrow with an open triangular head points from 'TestPerceptionModule' to 'testing::Test', indicating that 'TestPerceptionModule' inherits from 'testing::Test'.
